

To make an **8-factor** graph:

List all of **8's** factors.

 Connect each factor to *its* factors ...

 ... making sure no paths cross.

Make a **12-factor** graph.

<u>Factor</u>	<u># connections</u>
12	5
6	4
4	3
3	3
2	4
1	5

(A good way to determine which Factors are easiest/hardest to place, and also to check your work when you're done)
